
BUDGET REFORM PROPOSALS

15. BUDGET REFORM PROPOSALS

The budget process should be transparent, accountable, and orderly. The current budget process needs reforms to achieve these goals. No one change can fix the budget process, and process alone cannot address important fiscal issues. Nevertheless, process changes can be a key factor in the effort to control spending. Starting with *A Blueprint for New Beginnings* and continuing with subsequent budgets, this Administration has consistently proposed changes to the budget process, as well as an extension with changes to key provisions of the Budget Enforcement Act (BEA) of 1990, as amended, that are designed to improve budget decisions and outcomes. This chapter updates the Administration's previous proposals and describes additional reforms proposed by the Administration.

Controlling Entitlements and Other Mandatory Spending

Mandatory Spending Control.—The Administration proposes to require that all legislation that changes mandatory spending, in total, does not increase the deficit. The five-year impact of any proposals affecting mandatory spending would continue to be scored. Legislation that increases the current year and the budget year deficit would trigger a sequester of direct spending programs. The proposal does not apply to changes in taxes and does not permit mandatory spending increases to be offset by tax increases. This proposal effectively applies a pay-as-you-go requirement to mandatory spending. Table 15–1 displays the President's mandatory spending proposals that would be subject to this requirement.

Long-term Unfunded Obligations.—The Administration proposes new measures to address the long-term unfunded obligations of Federal entitlement programs. As discussed in Chapter 13 of this volume, “Stewardship,” spending by the Government's major entitlement programs, particularly Social Security and Medicare, is projected to rise in the next few decades to levels that cannot be sustained, either by those program's own dedicated financing or by general revenues. The Administration's proposed measures are designed to begin addressing these challenges.

In the Medicare Modernization Act (MMA) of 2003, Congress provided for a more comprehensive review of the Medicare program's finances and required the Medicare trustees to issue a warning when general revenue Medicare funding is projected to exceed 45 percent of Medicare's total expenditures. The President's Budget proposes to build on this reform by requiring an automatic reduction in the rate of Medicare growth if the MMA threshold is exceeded. If a warning was issued and action was not taken over the next six years to keep this threshold from being exceeded, the reduction would begin as a four-tenths of a percent reduction to all payments to providers in the year the threshold is exceeded, and would grow by four-tenths of a percent every year the shortfall continued to occur. This provision is designed to encourage the President and the Congress to reach agreement on reforms to slow Medicare spending and bring it back into line with the threshold established by the MMA.

Social Security's Disability Insurance (DI) program provides disability insurance coverage and benefits to

Note: a more detailed list of the Administration's mandatory proposals can be found in Table S–5 of the *Budget* volume.

America's workers. Outlays for the DI program have grown as a percentage of all Federal budget outlays from roughly 2.1 percent in 1989 to an estimated 3.6 percent in 2007. The Budget projects DI outlays will continue to increase as a percentage of the Federal budget, along with escalating annual cash deficits. The President's Budget proposes a new Funding Warning to highlight the escalating and persistent fiscal problems facing DI. If SSA's actuaries project a negative DI cash flow that is more than 10 percent of program cost for four consecutive years in the upcoming 10 years, the Board of Trustees will issue the warning in the annual Trustees Report. Issuance of a DI Funding Warning would require the President to propose legislation to respond to the warning within 15 days after the date of the next Budget submission; the Congress would then consider this legislation. The analysis of DI's budgetary impact will safeguard an important source of disability insurance while promoting sound fiscal policy.

In addition to this Medicare-specific control mechanism and DI Funding Warning, the President's Budget proposes to establish a broader enforcement measure to analyze the long-term impact of legislation on the unfunded obligations of major entitlement programs and to make it more difficult to enact legislation that would expand the unfunded obligations of these programs over the long-run. These measures would highlight proposed legislative changes that appear to cost little in the short run but result in large increases in the spending burdens passed on to future generations.

First, the Administration proposes a point of order against legislation that worsens the long-term unfunded obligation of major entitlements. The specific programs covered would be those programs with long term actuarial projections, including Social Security, Medicare, Federal civilian and military retirement, veterans disability compensation, and Supplemental Security Income. Additional programs would be added once it becomes feasible to make long-term actuarial estimates for those programs.

Second, the Administration proposes new reporting requirements to highlight legislative actions worsening unfunded obligations. Under these requirements, the Administration would report on any enacted legislation in the past year that worsens the unfunded obligations of the specified programs

Budget Discipline for Agency Administrative Actions.—A significant amount of Federal policy is made via administrative action, which can increase Federal spending, often on the order of tens of billions of dollars in entitlement programs such as Medicare or Medicaid. Although known costs are incorporated into the budget baselines of various programs, agencies frequently initiate unplanned for and costly proposals. Often, these costs are not reflected in the baseline, or are not accompanied by other actions that would pay for the proposed change. This results in increased spending and deficits.

Controlling these costs is integral to the Administration's commitment to reducing the deficit and enforcing fiscal discipline. Toward that end, the Director of the Office of Management and Budget issued on May 23, 2005 a memorandum to all Executive Branch agencies implementing a budget-neutrality requirement on agency administrative actions affecting mandatory spending. Discretionary administrative actions in entitlement programs, including regulations, program memoranda, demonstrations, guidance to States or contractors, and other similar changes to entitlement programs are generally required to be fully offset. This effectively establishes a pay-as-you-go requirement for discretionary administrative actions involving mandatory spending programs. Exceptions to this requirement are only provided in extraordinary or compelling circumstances.

Controlling Discretionary Spending

Discretionary Caps.—The Administration proposes to set limits for 2007 through 2012 on net discretionary budget authority and outlays equal to the levels proposed in the 2008 Budget. Legislation that exceeds the discretionary caps would trigger a sequester of non-exempt discretionary programs. Table 15–2 displays the total levels of discretionary budget authority and outlays proposed for 2007 through 2012. This approach would put in place a budget framework for the next five years that ensures constrained, but reasonable growth in discretionary programs. For 2007 through 2009, separate defense (Function 050) and nondefense categories would be enforced. For 2010–2012, there would be a single cap for all discretionary spending.

These discretionary levels do not reflect the Administration's proposal to replace aviation taxes that are currently recorded as governmental receipts with FAA user fees that would be recorded as offsetting collections. This budget-neutral reclassification lowers receipts and net budget authority by an identical amount and does not affect gross discretionary budget authority levels. If this proposal is enacted, the Administration would adjust discretionary spending levels downward for FY 2009–2012 by the amount of the proposal. In addition, a separate category for transportation outlays financed by dedicated revenues would be established for 2007 through 2009 at levels consistent with those enacted in the Safe, Accountable, Flexible, Efficient, Transportation Equity Act: A Legacy for Users (SAFETEA–LU). The Administration would support expanding the defense category to include all security programs and a corresponding change to create a non-security category to ensure resources are devoted to security programs and are not diverted for other purposes.

Program Integrity Cap Adjustments.—An improper payment occurs when Federal funds go to the wrong recipient, the recipient receives an incorrect amount of funds, or the recipient uses the funds in an improper manner. Approximately 80 percent of improper payments are overpayments. The Administration has made the elimination of improper payments a major focus. Federal agencies have aggressively reviewed Federal

¹ The discretionary budget authority total is equal to the 302(a) allocation provided in a separate deeming provision in both the House and the Senate, excluding emergencies enacted for the Global War on Terror and for border security in the Department of Defense and Department of Homeland Security Appropriations Acts (P.L. 109-289 and P.L. 109-295, respectively). The House included a deeming provision in section 2 of the special rule, H. Res. 818, on the Department of Interior, Environment, and Related Agencies Appropriations Act for 2007. The Senate included a deeming provision in section 7035 of P.L. 109-234, the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006.

² Includes outlays from discretionary budget authority.

programs to evaluate the risk of improper payments and have developed measures to assess the extent of improper payments. Processes and internal control improvements have been initiated to enhance the accuracy and integrity of payments and to report the results of these efforts, pursuant to the Improper Payments Information Act of 2002 (P.L. 107-300).

The results of the agencies' assessments have been aggregated into a Government-wide report entitled *Improving the Accuracy and Integrity of Federal Payments*. (The report can be found at www.whitehouse.gov/omb/financial/fia-improper.html.) In 2006, the agencies reported a total of \$40.5 billion in improper payments. This represents a 2.87 percent improper payment rate. Nearly 70 percent of those improper payments are in

four programs: Medicare, Earned Income Tax Credit, Old-Age, Survivors, and Disability Insurance, and Unemployment Insurance. This program integrity cap adjustment initiative also captures IRS efforts to improve tax compliance. While not technically improper payments, the challenges of tax compliance are similar to those of the improper payments programs.

In the context of the Administration's efforts to eliminate improper payments, the Administration is proposing adjustments for spending above a base level of funding within the discretionary levels for several program integrity initiatives, specifically for continuing disability reviews (CDRs) and redeterminations of eligibility in the Social Security Administration (SSA), Internal Revenue Service (IRS) tax enforcement, the

Health Care Fraud and Abuse Control Program (HCFAC) in the Centers for Medicare and Medicaid Services and Unemployment Insurance improper payments in the Department of Labor. These cap adjustments provide an effective way to ensure that limited resources are applied to activities that reduce errors and generate program savings.

In the past decade, there have been a variety of successful efforts to ensure dedicated resources for program integrity efforts. These efforts include cap adjustment funding for Social Security continuing disability reviews and integrity efforts associated with the Earned Income Tax Credit (EITC). These initiatives have led to increased savings for the Social Security and Supplemental Security Income programs and an increase in enforcement efforts in EITC. The Administration's proposed adjustments for program integrity activities will total \$876 million in budget authority in 2008 and \$1,310 million in budget authority in 2009 and \$1,562 million in budget authority in 2010.

For the Social Security Administration, the \$213 million cap adjustment would allow SSA to conduct an additional 200,000 Continuing Disability Reviews (CDRs) and an additional 500,000 SSI redeterminations of eligibility in 2008. As a result of these efforts, SSA

would recoup over \$1.8 billion in savings over a ten-year period, with additional savings after the ten-year period, as estimated by SSA's Office of the Actuary. The savings from one year of program integrity activities are realized over multiple years because some CDRs identify that the beneficiary has medically improved and is capable of working, which may mean that they are no longer eligible to receive Disability Insurance (DI) or Supplemental Security Income (SSI) benefits. This may also result in savings in Medicare and Medicaid, since eligibility for these programs is linked to DI and SSI. Overpayments of SSI benefits identified by a redetermination are not always recovered in the same year that the redetermination is conducted.

The return on investment (ROI) for CDRs is approximately 10 to 1 in lifetime program savings, and approximately 8 to 1 over the first ten years. The ROI for redeterminations is approximately 7 to 1. Redeterminations focus on an individual's eligibility for the means tested SSI program and generally result in a revision to the individual's benefit level. However, the schedule of savings resulting from redeterminations will be different for the base and the cap adjustment. This is due to the fact that redeterminations of eligibility can uncover underpayment errors as well as overpay-

¹ The proposed 2008 base and cap adjustment would include both CDRs and redeterminations, whereas the 2005, 2006 and 2007 numbers reflect only CDRs, as previous cap adjustments were for CDRs only. In 2008, the base is \$161 million for CDRs and \$103 million for redeterminations, and the cap adjustment is \$163 million for CDRs and \$50 million for redeterminations. In 2009, the cap adjustment is \$346 million for CDRs and \$107 million for redeterminations. In 2010, the cap adjustment is \$368 million for CDRs and \$117 million for redeterminations. In 2009 and 2010 the split for the base is the same as in 2008.

² The enforcement base for the 2007 Request is equal to the 2006 enacted enforcement base of \$6,378 million plus the 2006 enacted cap adjustment of \$446 million.

ment errors. SSI recipients are more likely to initiate a redetermination of eligibility if they believe there is an underpayment error, and these recipient-initiated redeterminations are included in the base. In addition, corrections for underpayment errors are realized more quickly than corrections for overpayment errors.

SSA is required by law to conduct CDRs for all beneficiaries who are receiving Disability Insurance benefits, as well as all children under 18 who are receiving Supplemental Security Income. SSI redeterminations are also required by law, but the frequency is not specified in statute. Because of this mandate, in previous President's Budgets it was assumed that SSA devoted the resources necessary to carry out between 500,000 and 700,000 full medical CDRs and between 1 and 2 million SSI redeterminations per year, with resulting savings built into the baseline for SSI and DI. However, actual performance of program integrity activities has been well below this level. This year, the baseline assumes a more likely scenario for program integrity funding, and the President's Budget shows the savings which will result from the program integrity cap adjustment proposal.

For the IRS, the \$440 million cap adjustment covers cost increases (+\$149 million) for the \$6.8 billion base IRS enforcement program plus new investments in expanding staff and improving the efficiency of the IRS' enforcement programs (+\$291 million). As a result of

these efforts, the IRS will collect an estimated \$51 billion in 2007 in direct enforcement revenue. The IRS succeeded in increasing this figure by 44 percent between 2002 and 2006. The IRS estimates that work completed by the proposed new staff in 2008 will eventually yield another \$317 million. Once these new staff are trained and become more experienced the enforcement revenue impact of the work they complete each year will rise to \$699 million. However, this ROI estimate is understated because much of the new investment is directed towards efforts to improve the performance of the existing staff (such as new computers and better research) that are not reflected in the IRS' ROI calculation. More importantly, the ROI is understated because it does not reflect the impact enhanced enforcement has on deterring non-compliance that helps to ensure the continued payment of more than \$2 trillion in taxes voluntarily paid each year. The impact of increased IRS enforcement on improving voluntary compliance is not directly measured. However, research suggests it is at least three times as large as the direct impact on revenue.

The discretionary cap adjustment of \$183 million for the Centers for Medicare and Medicaid Services' HCFAC program is designed to provide additional resources to identify and reduce improper payments in the Medicare prescription drug benefit and Medicare Advantage programs. This \$183 million would build on

Table 15-4. DIRECT SAVINGS ESTIMATED FROM 2008 PROGRAM INTEGRITY FUNDING

(Budget authority in millions of dollars)

	2008 Program Integrity Funding	Direct Savings Estimates										
		2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	Total
SSA Continuing Disability Reviews¹												
Enforcement Base	264	578	-608	-414	-250	-206	-200	-185	-169	-162	-142	-1,758
Cap Adjustment	213	-31	-439	-288	-188	-164	-158	-148	-137	-130	-118	-1,801
IRS Tax Enforcement²												
Enforcement Base	6,788	-50,900										-50,900
Cap Adjustment ³	440	-51	-194	-43	-14	-7	-4	-2	-1	-1		-317
Health Care Fraud and Abuse Control Program												
Cap Adjustments ⁴	183	-330										-330
Unemployment Insurance Improper Payments⁵												
Enforcement Base	10	-50										-50
Cap Adjustments	40	-145	-60									-205

¹ This is based on SSA's Office of the Actuary estimates of savings from CDRs and redeterminations. In the first year, the enforcement base shows a positive outlay. This is due to the fact that redeterminations of eligibility can uncover underpayment errors as well as overpayment errors. SSI recipients are more likely to initiate a redetermination if they believe there is an underpayment, and SSA completes these beneficiary-initiated redeterminations in the enforcement base. In addition, corrections for underpayments are realized more quickly than corrections for overpayment. The cap adjustment does not show an outlay in the first year because SSA would target their cap adjustment redetermination dollars to cases where an overpayment is suspected.

² Savings for IRS are revenue increases rather than spending reductions. They are shown as negatives for consistency in presentation. At the base level they are shown as constant for simplicity.

³ The Internal Revenue Service (IRS) cap adjustment funds cost increases for the base program (+\$149 million) and new initiatives (+\$291 million). The IRS collects \$51 billion per year (2007 estimate) in direct enforcement revenue, and its enforcement program helps maintain the more than \$2 trillion in taxes voluntarily paid each year. The cost increases will help maintain the base revenue. The 2008 initiatives will yield an estimated \$317 million in new enforcement revenue, fund improvements in the base program such as new computers and better research, and help deter tax cheating. This deterrence impact is not directly measured. However, research suggests it is at least three times as large as the direct impact on revenue.

⁴ These data are based on estimates from the HHS Office of the Actuary for return on investment from program integrity activities.

⁵ The maximum UI benefit period is typically 26 weeks. As a result, preventing an ineligible individual from collecting UI benefits would save at most a half year of benefits. The two years of savings reflect the fact that reemployment and eligibility assessments conducted late in the year affect individuals whose benefits would have continued into the subsequent fiscal year.

Table 15–5. TRANSPORTATION CATEGORY FOR HIGHWAYS AND MASS TRANSIT SPENDING

(Amounts in millions of dollars)

	2007	2008	2009
Transportation Category:¹			
Highways: ²			
Obligation Limitations	36,847	40,946	42,581
Outlays	33,840	37,649	39,443
Mass Transit:			
Obligation Limitations	6,910	7,873	8,406
Outlays ³	7,479	8,740	9,774
Memorandum:			
<i>Discretionary budget authority for Mass Transit included in the Nondefense Category:</i>			
<i>Budget authority</i>	1,688	1,550	1,980

¹ The amounts included for 2007 reflect the levels provided by the continuing resolution (P.L. 109–289, Division B, as amended). The SAFETEA–LU levels enacted for Highway and Mass Transit programs apply in 2008 and 2009.

² The Highway levels do not include adjustments authorized in SAFETEA–LU of \$631 million in FY 2008 for the revenue aligned budget authority (RABA) calculation. The levels do include \$122 million in FY 2008–2009 for the National Highway Traffic Safety Administration. The proposal is to fund NHTSA completely from the Highway Trust Fund instead of a portion from General Fund, as authorized in SAFETEA–LU.

³ Includes outlays from discretionary budget authority.

funding provided in the Deficit Reduction Act of 2005 for Part D program integrity activities for FY 2006 only. The funding would be allocated among CMS, the Health and Human Services Office of Inspector General, the Federal Bureau of Investigation, and Department of Justice to safeguard these programs as well as Medicaid against fraud and abuse. This \$183 million would generate approximately \$330 million in savings in FY 2008, which would reflect recouping improper payments made to providers.

The 2008 Budget proposes a discretionary cap adjustment of \$40 million for the Department of Labor’s (DOL) Unemployment Insurance (UI) State administrative grants program to reduce UI improper payments, a top management challenge identified by GAO and DOL’s Inspector General. The proposal would expand a \$10 million Reemployment and Eligibility Assessment initiative begun in 2005 to finance in-person interviews at One-Stop Career Centers to assess UI beneficiaries’ need for job-finding services and their continued eligibility for benefits. The current \$10 million effort results in a savings in UI benefit payments of \$50 million. The maximum UI benefit period is typically 26 weeks. As a result, preventing an ineligible individual from collecting UI benefits would save at most a half year of benefits. The two years of savings from the additional \$40 million, totaling \$145 million in 2008 and \$60 million in 2009, reflect the fact that reemployment and eligibility assessments conducted late in the year affect individuals whose benefits would have continued into the subsequent fiscal year.

Transportation Category.—The Administration’s proposal for discretionary caps includes separate outlay categories for spending on Federal Highway and Mass Transit programs. The transportation levels will be financed by dedicated revenues through 2009. Table 15–5 shows the levels, excluding the revenue aligned budget

authority (RABA) adjustment as authorized in SAFETEA–LU for 2007 and 2008. The RABA adjustment is calculated based on changes in estimated Highway Trust Fund receipts, and results in either an increase or decrease in the Highway Category funding level enacted in SAFETEA–LU. The amounts shown for 2007 reflect the levels provided by the continuing resolution (P.L. 109–289, Division B, as amended), which did not include the 2007 RABA adjustment authorized in SAFETEA–LU. For 2008, the RABA adjustment authorized in SAFETEA–LU is a positive \$631 million; however, the Administration proposes not to provide this increase in funding in order to preserve the solvency of the Highway Trust Fund.

Advance Appropriations.—An advance appropriation becomes available one or more years beyond the year for which its appropriations act is passed. Budget authority is recorded in the year the funds become available and not in the year of enactment. Too often, advance appropriations have been used to expand spending levels by shifting budget authority from the budget year into the subsequent year and then appropriating the budget authority freed up under the budget year discretionary cap to other programs. The effect of these advance appropriations is to limit the amount of discretionary budget authority available in subsequent years, thereby reducing future funding options available to both Congress and the President. From 1993 to 1998, an average of \$2.3 billion in discretionary budget authority was advance appropriated each year. In 1999, advance appropriations totaled \$8.9 billion and increased to \$23.4 billion in 2000.

Because this budget practice distorts the debate over Government spending and misleads the public about spending levels in specific accounts, the 2001 Congressional Budget Resolution and this Administration’s budget proposals have capped advance appropriations

at the amount advanced in the previous year. By capping advance appropriations, increases in these and other programs can be budgeted and reflected in the year of their enactment. For 2009, the Administration proposes a cap on advance appropriations of \$23,174 million.

In addition, the Administration proposes to score the second-year effect of appropriations language that delays obligations of mandatory budget authority as advance appropriations that count against the discretionary caps. Appropriations acts often include provisions that delay obligations of mandatory BA from one year to the next. The first year is appropriately scored as a discretionary savings because it is included in an appropriations act and it reduces spending in that year. However, this is usually a temporary delay, and the funds become available for spending in the second year. Under this proposal, the second-year impact would be treated as an advance appropriation and scored against the discretionary caps. This would correct an inconsistency in the current practice where savings are scored in the first year, but the second-year impact is reclassified in the subsequent budget as mandatory and not scored against the discretionary caps.

To enforce the level of advance appropriations, the discretionary cap proposal provides that total funding for advance appropriations (including obligation delays) provided in an appropriations act for 2009 that is in excess of the Administration's limit on advance appropriations of \$23,174 million in 2009 will count against the discretionary cap in the year enacted, not against the year the funds first become available.

For more information on individual accounts with advance appropriations, please see the chapter on this subject in the Budget Appendix.

Federal Pell Grants.—To ensure funding shortfalls do not accumulate in the Pell Grant program in future years, the 2006 Congressional Budget Resolution adopted the Administration's proposal to score appropriations at the amount needed to fully fund the award level set in appropriations acts, beginning with the 2006–2007 school year, if the amount appropriated is insufficient to fully fund all awards. The Administration proposes to continue this scoring rule. Under this rule, the amount scored would be increased to cover any cumulative funding shortfalls from previous years and reduced by any surpluses carried over from previous years, beginning with any shortfalls or surpluses from the 2006–2007 school year. If the amount appropriated exceeds the estimated full cost, the amount appropriated would be scored against that year, and the surplus would carry over as a credit against the following year's cost estimate. In the 2008 Budget, the Department of Education estimates that a cumulative \$235 million shortfall will be carried into the 2008–2009 academic year. Because there is no final 2007 appropriation for this account, the Budget assumes a 2007 enacted level of \$12.607 billion for calculating this shortfall, which was the CBO estimate of the 2007 Senate Subcommittee appropriation of a \$4,050 maximum

award for the 2007–2008 award year. For scoring purposes, the funding needed to fully fund all awards for 2008–2009 is increased by the amount of this shortfall.

Project BioShield Category.—The Administration proposes a separate BEA category for budget authority for Project BioShield, which received an advance appropriation for 2009 of \$2.2 billion in P.L. 108–90, the 2004 Department of Homeland Security Appropriations Act. Because the success of this program in providing for the development of vaccines and medications for biodefense depends on an assured funding availability, it is critical that this funding not be diverted to other purposes. The Administration's proposal to create a separate category will help ensure that funding for this program is not reduced and used as an offset for other discretionary spending.

Include Stricter Standard For Emergency Designation in the BEA

When the BEA was enacted in 1990, it provided a “safety valve” to ensure that the fiscal constraint envisioned by the BEA would not prevent the enactment of legislation to respond to unforeseen disasters and emergencies such as Operation Desert Storm, the terrorist attacks of September 11, 2001, or Hurricane Katrina. If the President and the Congress separately designated a spending or tax item as an emergency requirement, the BEA held these items harmless from its enforcement mechanisms. Initially, this safety valve was used judiciously, but in later years its application was expanded to circumvent the discretionary caps by declaring spending for ongoing programs as “emergencies.”

The Administration proposes to include in the BEA a definition of “emergency requirement” that will ensure high standards are met before an event is deemed an “emergency” and therefore exempt. This definition should include the following elements: the requirement is a necessary expenditure that is sudden, urgent, unforeseen, and not permanent. These elements, all of which would be used for defining something as an emergency, are defined as follows:

- necessary expenditure—an essential or vital expenditure, not one that is merely useful or beneficial;
- sudden—quickly coming into being, not building up over time;
- urgent—pressing and compelling, requiring immediate action;
- unforeseen—not predictable or seen beforehand as a coming need (an emergency that is part of the average annual level of disaster assistance funding would not be “unforeseen”); and
- not permanent—the need is temporary in nature.

This definition codifies the criteria for an emergency that have been the standard for a number of years. It is designed to preclude funds from being declared an emergency for events that occur on an annual or recurring basis. For example, even though it is not possible to predict the specific occurrence of fires, tor-

nados, hurricanes, and other domestic disasters, it is reasonable to assume that a combination of domestic disasters will occur in any given year that require funding equal to a multi-year average for disaster relief. Funding at an average, therefore, should not be considered an emergency under this definition. On the other hand, an average level of funding for domestic disasters will not accommodate the level necessary to address a large and relatively infrequent domestic disaster, such as Hurricane Katrina. Under this definition for emergencies, spending for extraordinary events could be classified as emergency funding. In the end, classification of certain spending as an emergency depends on common sense judgment, made on a case-by-case basis, about whether the totality of facts and circumstances indicate a true emergency.

In addition, the Administration proposes that the definition of an emergency requirement also encompass contingency operations that are national security related. Contingency operations that are national security related include both defense operations and foreign assistance. Military operations and foreign aid with costs that are incurred regularly should be a part of base funding and, as such, are not covered under this definition.

The Administration proposal also would require that the President and Congress concur in designating an emergency for each spending proposal covered by a designation. This would protect against the “bundling” of non-emergency items with true emergency spending. If the President determines that specific proposed emergency designations do not meet this definition, he would not concur in the emergency designation and no discretionary cap adjustment or mandatory spending control exemption would apply.

Baseline

The Administration supports the extension of section 257 of the BEA governing baseline calculations with the following changes:

- Assume extension of all expiring tax provisions in the Economic Growth and Tax Relief Reconciliation Act of 2001 and certain provisions in the Jobs and Growth Tax Relief Reconciliation Act of 2003. This proposal is consistent with the BEA baseline rules for expiring mandatory spending and for excise taxes dedicated to a trust fund. Except for a few relatively small mandatory programs, the BEA assumes that mandatory spending and excise taxes dedicated to a trust fund will be reauthorized and extends them in the baseline. The 2001 Act and 2003 Act provisions were not intended to be temporary, and not extending them in the baseline raises inappropriate procedural road blocks to extending them at current rates.
- Add a provision to exclude discretionary funding for emergencies from the baseline. Instead, the baseline would include emergency funding only for the year in which it was enacted. The current

requirement is for the discretionary baseline estimates for the budget year and the outyears to assume the current year appropriated level, adjusted for inflation. This is reasonable for ongoing programs, where the need is expected to continue into the future. For emergencies, since the need should be for a short duration, the baseline rules build unnecessary funding into the baseline estimates for the years after the need has been addressed and passed. In effect, the current rule biases the baseline in favor of higher discretionary spending.

- Correct the overcompensation of baseline budgetary resources for pay raise-related costs due to the way in which these costs are inflated. The current requirement, which provides a full year’s funding for pay raises in the budget year and beyond, was written when Federal pay raises were scheduled to take effect on October 1, at the start of each fiscal year. However, this requirement is now inappropriate because the effective date for pay raises is now permanently set by law as the first pay period in January. By treating pay raises that begin on January 1 as if they take effect for the entire fiscal year, the baseline overstates the cost of providing a constant level of services.
- Eliminate the adjustments for expiring housing contracts and social insurance administrative expenses. Most multi-year housing contracts have expired or have been addressed since the BEA was first enacted in 1990, so the adjustment is no longer needed. The adjustment for social insurance administrative expenses is also inconsistent with the baseline rules for other accounts that fund the costs of administration. These programs should not be singled out for preferential treatment.

Earmark Reform

An earmark is a spending provision that the Congress inserts in legislation. Frequently, these provisions are not publicly disclosed during the legislative process and often they are special interest projects. A number of organizations track earmarks. The Congressional Research Service (CRS) and Citizens Against Government Waste (CAGW) have been tracking earmarks for over a decade. While they do not use the same definition, their data show similar trends. Earmarks have expanded dramatically in recent years, with the numbers and costs of earmarks more than tripling since the early 1990s. According to CAGW, the Congress added nearly 550 earmarks at a cost of \$3 billion to the Budget in 1991. The number of earmarks peaked in 2005. CAGW has estimated that earmarks grew to almost 14 thousand at a cost of \$27 billion. CRS data show a similar trend, with earmarks reaching more than 16 thousand in 2005 at a cost of \$52 billion. OMB has also been tracking earmarks during recent years and estimates that the number of earmarks grew to over 13 thousand at a cost of nearly \$18 billion. OMB is

in the process of developing the capability to track earmarks during the legislative process.

One major concern about earmarks is the lack of transparency. Most earmarks do not appear in statutory language. Instead, they are included in committee reports that accompany legislation. According to CRS, more than 90 percent of earmarks are in report language. This means that the vast majority of earmarks do not appear in the statutory language that the Congress actually votes on or that the President signs into law. Also, earmarks frequently surface in the last stage of the legislative process, in conference committees between the House and the Senate.

The President has called on the Congress to fully disclose all earmarks to reduce the amount of wasteful and unnecessary spending. Taxpayers should feel confident that their tax dollars are being spent wisely. Unfortunately, the large number of earmarks and the lack of transparency in the earmarking process make it difficult to assure the public that the Government is spending the people's money on the Nation's highest priorities. The President has proposed that the Congress provide justification for earmarks, and identify the sponsor, costs, and recipients of each project. In addition, the President has proposed that the Congress stop the practice of placing earmarks in report language. Finally, he has called on the Congress to cut the number and cost of earmarks by at least 50 percent.

Line-Item Veto

A perennial criticism of the Federal Government is that spending and tax legislation contain too many provisions that are not fully justified, are a low priority, or are earmarked to avoid the discipline of competitive or merit-based reviews. These special interest items would likely not become law if considered as a stand-alone bill, and their persistence diverts resources from higher priority programs and erodes the confidence of citizens in Government.

From the Nation's founding, presidents have exercised the authority to not spend appropriated sums. However, Congress sought to curtail this authority in 1974 through the Impoundment Control Act, which restricted the President's authority to decline to spend appropriated sums. Although the Line Item Veto Act of 1996 attempted to give the President the authority to cancel spending authority and special interest tax breaks, the U.S. Supreme Court found that law unconstitutional.

Last year, the President asked that Congress correct this state of affairs by providing him and future presidents with a line item veto that would withstand constitutional challenge, and the President transmitted legislation to the Congress in March 2006 that accomplishes this purpose. Under the President's proposal, a President could propose legislation to rescind wasteful spending, and the Congress would be obligated to vote quickly on that package of rescissions, without amendment. All savings from the line-item veto would be used

for deficit reduction; they could not be applied to augment spending elsewhere.

The President's proposal received strong support. In June 2006, the House of Representatives voted on a bipartisan basis to enact a version of the Legislative Line Item Veto. In the Senate, members voted to report an amended version of the President's proposal out of the Senate Budget Committee for consideration on the floor.

Forty-three Governors have a line item veto to reduce spending, and the President needs similar authority to help control unjustified and wasteful spending in the Federal budget. The Administration urges continued support for this common-sense provision and will seek its enactment in the 110th Congress.

Other Budget Reform Proposals

Joint Budget Resolution.—A joint budget resolution would set the overall levels for discretionary spending, mandatory spending, receipts, and debt in a simple document that would have the force of law. Under the current process, the Congress annually adopts a "concurrent resolution," which does not require the President's signature and does not have the force of law.

A joint budget resolution could be enforced by sequesters requiring automatic across-the-board cuts to offset any excess spending, similar to the BEA. It would bring the President into the process at an early stage, encourage the President and the Congress to reach agreement on overall fiscal policy before individual tax and spending bills are considered, and give the budget resolution the force of law.

Biennial Budgeting and Appropriations.—Only three times in the last 25 years have all appropriation bills been enacted by the beginning of the fiscal year. Because Congress must enact these bills each year, it cannot devote the time necessary to provide oversight and fully address problems in Federal programs. The preoccupation with these annual appropriations bills frequently precludes review and action on authorization legislation and on the growing portion of the budget that is permanently funded under entitlement laws. According to the Congressional Budget Office, in recent years the Congress appropriated between \$160 billion and \$170 billion for programs and activities whose authorizations of appropriations have expired.

In contrast, a biennial budget would allow lawmakers to devote more time every other year to ensuring that taxpayers' money is spent wisely and efficiently. In addition, Government agencies would receive more stable funding, which would facilitate longer range planning and improved fiscal management. Under the President's proposal for a biennial budget, funding decisions would be made in odd-numbered years, with even numbered years devoted to authorizing legislation.

Government Shutdown Prevention.—In the 22 out of the past 25 years in which Congress has not finished appropriation bills by the October 1st deadline, it has funded the Government through "continuing resolutions" (CRs), which provide temporary funding author-

ity for Government activities, usually at current levels, until the final appropriations bills are signed into law.

If Congress does not pass a CR or the President does not sign it, the Federal Government must shut down. Important Government functions should not be held hostage simply because of an impasse over temporary funding bills. There should be a back-up plan to avoid the threat of a Government shutdown, although the expectation is that appropriations bills still would pass on time as the law requires. Under the Administration's proposal, if an appropriations bill is not signed by October 1 of the new fiscal year, funding would be automatically provided at the lower of the President's Budget or the prior year's level.

Results and Sunset Commissions.—The Federal Government's ability to serve the American people is often hampered by poorly designed programs or uncoordinated, overlapping programs trying to achieve the same objective. Today, almost 30 percent of assessed programs have been determined to be either ineffective or unable to demonstrate results. And the problem of overlapping programs exists in many areas where the Government is trying to serve.

From the 1930s through 1984, presidents were permitted to submit plans for reorganizing Federal agencies to Congress that would become effective unless the plan was disapproved by either House of Congress.

After the Supreme Court decision in *INS v. Chadha* (462 U.S. 919), the authority granted to presidents for submitting reorganization plans under the Reorganization Act (5 U.S.C. 903) was limited by the requirement of congressional approval through a joint resolution and by the scope of what could be proposed. This authority was no longer available to the President after 1984.

Today, proposals to restructure or consolidate programs or agencies so they can perform better require a change in law and often face long odds of being enacted due to a cumbersome process that requires approval from multiple congressional committees.

To address this problem, in June 2005 the Administration transmitted the Government Reorganization and Program Performance Improvement Act, which would establish bipartisan Results Commissions and a Sunset Commission. Results Commissions would consider and revise Administration proposals to restructure or consolidate programs or agencies to improve their performance. The Sunset Commission would consider Presidential proposals to retain, restructure, or terminate agencies and programs according to a schedule set by the Congress. Agencies and programs would automatically terminate according to the schedule unless reauthorized by the Congress. The legislation was introduced in the House and Senate, but was not enacted.
