

June 20, 2007

The Honorable Harry Reid  
Majority Leader  
United States Senate  
Washington, DC 20510

Dear Leader Reid:

We, the undersigned business organizations strongly support the swift passage of legislation that will promote and advance the widespread adoption of health information technology (Health IT).

The business community recognizes that health information technology is essential to improving the nation's health care system. A nationwide network of electronic health information will reduce medical errors and administrative costs, and dramatically improve the quality, cost, and delivery of health care. By supporting and passing Health IT legislation, Congress can save lives and dollars. Last Congress, the House and Senate passed differing bills to address the broad issue of Health IT yet failed to reach consensus between chambers.

It is imperative that the 110<sup>th</sup> Congress take the necessary steps to ensure that standards for interoperability are adopted. Only through an interoperable, nationwide system of electronic exchange will the benefits of health information technology be realized. Through its leadership on this issue, Congress can provide much-needed certainty and direction, which will help spur private sector investment in health information technology. By continuing to work together, the private and public sectors can achieve this crucial goal.

This is a rare instance of a health care issue that has broad consensus. The business community is united in its support for this legislation. As the House and Senate consider their respective Health IT bills, we strongly urge you to take advantage of this opportunity and make widespread health information technology a reality. The future of the nation's health care system depends on it.

Sincerely,

American Benefits Council  
Business Roundtable  
Corporate Health Care Coalition  
HR Policy Association
